

HDTV is the ultimate home-viewing experience. You get a wider screen, impeccable picture quality, and the very best in sound.

Here are some of the things that make HDTV special.

Screen Size

Standard TV (4:3): A standard TV shows programs in an almost square 4:3 format. If you watch a widescreen program with standard TV, about one-third or more of the picture gets cut off.

Widescreen (16:9): HDTV shows you widescreen programs and movies as they were meant to be seen. The widescreen format is often called “sixteen by nine (16:9)” to refer to its wider, larger display. This format is much wider than standard TV, giving you a fuller picture and true cinematic experience.

Picture Clarity

Sharpness: HDTV is up to ten (10) times sharper than standard TV, giving you absolutely the best picture available – even better than the picture you get with standard DVDs.

Depth: HDTV has a depth that’s unlike anything you’ve seen before, making movies, sports and your favorite shows really come alive.

True Surround Sound

HDTV has the best sound quality. Most HDTV programs are available with Dolby Digital 5.1 Surround Sound. This gives you a huge improvement over regular TV sound – even over Stereo Sound.

Standard Stereo Sound gives you 2 audio channels: Left and Right.

Dolby Digital 5.1 gives you 5 audio channels: Left, Right, Center, Rear Left, Rear Right, plus Bass. This helps re-create a theater-like viewing experience.

Note: You must have the right audio equipment to take advantage of Dolby Digital Sound

Digital Cable & HDTV

What is the difference between Digital Cable and HDTV?

Digital Cable: Digital Cable is a digital television signal that offers an enormous improvement over standard TV, giving you better picture and 100s of channels – plus interactive services like Movies on Demand, the Digital Video Recorder and more. You can watch Digital Cable on a standard TV.

HDTV – The Ultimate TV Experience: HDTV enhances your Digital Cable experience, by offering a wider screen, even better resolution, crystal clear picture, the most vivid colors, and cinematic depth.

HDTV is the best television experience possible. It’s like having a theater right in your home.

HD Equipment

To get HDTV, you need two things:

1. Digital Cable – because HDTV is digital technology
2. An HDTV

To learn more, go to the **HD Equipment** tutorial.
